PROHIBITION OF GENETIC THERAPY, GENE EDITING AND GENOME EDITING (effective 1 April 2025)

a. Definition of Genetic Therapy

A Genetic Therapy is defined as including any therapy, method or process which involves the use or administration of:

- i. oligomers or polymers of nucleic acid
- ii. nucleic acid analogues
- iii. genetically modified cells

iv. gene editing agents which are capable, at any time, of directly or indirectly causing an action or effect on, and/or manipulating, gene expression in any mammalian body, including but not limited to gene editing agents with the capacity to alter genome sequences and/or the transcriptional, post-transcriptional or epigenetic regulation of gene expression.

For the avoidance of doubt, the following are not defined as a Genetic Therapy for the purpose of the FEI Equine Anti-Doping and Controlled Medication Regulations:

• the use or administration of autologous conditioned serum or "platelet-rich plasma" treatments which do not involve the transfer of whole cells / DNA.

b. Except as provided by the FEI Anti-Doping and Controlled Medication Regulations, the use or administration of a Genetic Therapy on or to a Horse is prohibited at all times.

c. Exempted Genetic Therapy

A Genetic Therapy may be used or administered to a specific Horse with the express prior approval of the FEI if that Genetic Therapy is used to treat an injury or disorder formally diagnosed by a Veterinarian, and:

- a. is not capable of modifying a Horse's heritable genome;
- b. does not pose a threat to the welfare of Horse;

c. does not pose a threat to the integrity of the FEI or equestrian sport, either by having the potential to enhance or harm the performance of a Horse in a Competition.

d. Control and recording
