FEI DATABASE – CLEAR URLs

The table below describes each parameter supported in the query string. If the format of the parameter is not supported or if the dependences between parameters are not respected, the corresponding filter will not be set.

For example, specifying “Reining” for the Discipline parameter and setting a “World Cup League” will result in the following situation: the “Discipline” filter will be set to “Reining” but no league will be set (as there are no World Cup leagues in Reining).
