HORSE ARRIVAL PROCEDURE

Prior to arrival: Athlete/Groom announce their arrival time in advance

On arrival: Check Point - Stable Manager: Stables allocation
All horse passports collected by Stable Manager/stable personnel (identify all horses from the same truck and keep passports together)

Unloading of horses from the truck, horses placed in allocated stables. Athlete/Groom takes the horse's temperature in its stable under the surveillance of an FEI Veterinarian assigned by the Veterinary Delegate (VD). FEI Veterinarian scans the horse’s microchip to establish ID (using Bluetooth microchip reader & FEI HorseApp), checks for any other signs of infectious disease and equine influenza vaccinations (as indicated by FEI Veterinary Regulations) and records the horse’s temperature in the FEI HorseApp.

NO HORSE ALLOWED TO LEAVE ITS STABLE UNTIL A CORRECT TEMPERATURE MEASUREMENT IS RECORDED

38.5°C > temperature < 39.0°C: horse on hold - orange sticker on the stable door, temperature and time noted on horse’s name chart outside stable door

38.5°C ≥ temperature < 39.0°C: Horse accepted: green sticker on the stable door & temperature record sheet provided to the athlete/groom

Temperature > 39.0°C: Veterinarian’s decision to refuse the horse, which is moved to isolation overflow stables. Red sticker & cable tie on the stable door to block access prior to disinfection.

If temperature returns to normal & the assessment of the VD is that the horse is not carrying any infectious diseases, the horse can be presented again at the showground the following day. Horse to return to original stable. All in-contact horses to undergo same procedure.

If temperature does not return to normal or horse displays clinical signs, horse remains in isolation overflow stables or is referred to other veterinary care. In-contact horses can only return to the showground if infectious diseases are ruled out.

SHOW OFFICE: bring FEI Passport & temperature recording sheet, athlete/groom to sign agreement to respect sanitary (Covid-19) and biosecurity (EHV-1) measures prior to getting horse's bridle number.
