# COMPETITIONS

Statistics 2005 – 2015

## Key Facts

---

Total number of competitions keeps growing with a **85% increase** from 2005 to 2015.

---

As from 2011 the total number of competitions include multiple sections.

---

Pony competitions are not included.

The distribution between the competition formats has remained relatively stable. In 2015, 67% of competitions were CICs versus 33% CCIs as opposed to 66% for CICs and 34% for CCIs in 2005.

# STARTERS

Statistics 2005 – 2015

## Key Facts

---

Total number of starters keeps growing with a **62% increase** from 2005 to 2015. The average number of starters per competition is 30.

---

As from 2011 the total number of competitions include multiple sections.

Distribution of starters per star level remains basically unchanged with an average of 47.5% for one star, 34.2% for two star, 16.6% for three star and 1.7% for four star. The starters at one star level represent nearly 50% of the total number of starters in FEI competitions and together with the two star level make up 80% of the total number of starters.

---

Within the overall increased number of starters the distribution between format shows a stable trend with approximately 69% CICs and 31% CCIs.

# FALLS

Statistics 2005 – 2015

## Key Facts

---

For 2015, the overall percentage of falls (5.60%) has slightly increased compared to 2014 (5.59%), it is slightly higher than the 2009-2013 average of 5.37%.

---

The number of falls on the flat has increased for 2015, passing from 10,07 % in 2014 to 12.19% in 2015. The average over the period is of 6.98%.

The average for the period is of 3.92 unseated riders for every 100 starters (1 unseated rider every 25 starters) and 1.68 horse falls for every 100 starters (1 horse fall every 60 starters).

---

The distribution of falls per competition format shows an established trend with a higher percentage of falls in CCI with an average for the period of 4.93% for CICs and 6.74% for CCIs.

Figures for 2015 show a slight increase of the percentage of unseated riders. However horse falls have decreased from 1.64% in 2014 to 1.41 % in 2015.

The percentage of horse falls is below the average of the period.

---

The percentage of rotational horse falls (higher risk of injuries for horse and rider) has decreased from 0.45 horse fall every 100 starters (1 rotational horse fall every 224 starters) in 2005 to 0.19 rotational horse fall every 100 starters (1 rotational horse fall every 536 starters) in 2015.

# INJURY

Statistics 2005 – 2015

## Key Facts

---

The numbers and statistics in this section need to be assessed with due care as the reporting on injuries has not always been consistent. The reporting of the type of injury sustained was originally left to the fence judge that could only base his judgment on a “first impression” which could often be misleading. An improved follow up procedure on injuries has been implemented as of 2010 in order to have more reliable information on the exact injuries sustained by the riders and horses.

Therefore, figures from 2010 to 2015 should be considered more reliable, particularly if not compared with the other years. The distribution of falls per competition format shows an established trend with a higher percentage of falls in CCIs with an average for the period of 4.93% for CICs and 6.74% for CCIs.

Nevertheless the average values for the period indicate 4.99% falls with no injury every 100 starters (1 fall with no injury every 20 starters), 0.41 % falls with slight injury every 100 starters (1 fall with slight injury every 245 starters), 0.19 % falls with serious injury every 100 starters (1 fall with serious injury every 520 starters) and a 0.0058 % fatal falls every 100 starters (1 fatal fall every 17,317 starters)

# INJURY

Statistics 2005 – 2015

## Key Facts

---

Figures for 2015 show a slight increase of the percentage of unseated riders. However horse falls have decreased compared with 2014. The percentage of horse falls is below the average of the period.

---

Relating the risk of an injury to the number of fences jumped the average of the period shows a risk of a serious injury every 16,121 fences jumped.

The relative risk factors for the different types of falls show clearly that the risk of having a serious injury changes dramatically from the unseated rider for whom, as an average of the period, the risk of having a serious injury is once every 55 falls to the rotational horse falls where the average risk of a serious injury is once every 5 falls.
