The Intelligent Spurs System

An innovational spur design that is relevant to every rider: spurs that are directly integrated into riding boots tall or short. The intelligent spurs system SmartClix offers the rider a number of key advantages:

- A personalized contact from the spur to the horse through the selection and adjustment of the spurstick
- Concise signals given by riders' aid as the spurstick is firmly attached to the boot

SmartClix is height adjustable

Higher or lower: The spurstick can be attached from the bottom or from the top of the base as required.

20 mm

25 mm

SmartClix offers different types of spurs

Rounded necks in different lengths or with rowel: The rounded neck spursticks are available in 20, 25 and 30 mm length. A 30 mm rowel spurstick is offered additionally.

30 mm

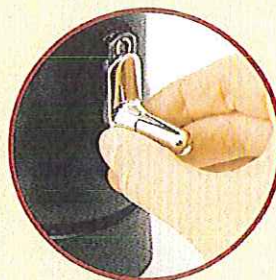

30 mm

SmartClix offers pivotal rowels

Classically vertical or rather conveniently horizontal: The rowel spurstick can be turned into either position. Therefore the contact changes easily according to the rider's requirements.

SmartClix is fast, comfortable and elegant

Eliminates time consuming securing/un-doing spur straps. Just one click and it is ready – it's that simple. Furthermore, the boot leather does not get damaged by friction normally associated with traditional spurs. The reduced visual ensures an elegant performance.

Boots with SmartClix are exclusively available from Cavallo as of February 2010.
