

Guidelines for the use of technical devices at FEI Dressage events

This is a general guideline and will apply for all FEI events and all technical systems, with the exception of cameras used during the entire competition by the host broadcaster.

Athletes/Horses are permitted to wear transponders/sensors in such a way that it is not visible. Athletes are allowed to wear a watch or any other kind of sensor-like apparatus on their bodies or equipment. Helmet cameras are not allowed.

According to the FEI Dressage rules, there may not be any communication whilst competing.

Cameras or other technical devices may not be placed in the competition arena or within an area of ten (10) metres around the arena. This includes markers, decoration or judges boxes.

If the field of play is bigger than 80 x 40 metres, devices may be placed in a dedicated area (box) defined by the OC. These areas may only be entered during breaks or after the end of the competition. The devices may not disturb the competition in any way.

Written approval to place these devices must be granted by the FEI Chief Steward and the Organising Committee, at the latest one (1) hour before the start of the competition.

Training areas:

With the permission of the FEI Chief Steward and the Organising Committee, technical devices are allowed in the training arena although cameras and/or other technical devices may not be placed within the Dressage arena.

Athletes are not allowed to deliver any images (moving or not moving) to the media or to use them on their own social media without approval of the FEI.

All rights regarding broadcasting and/or the use of any images in social media belong to the FEI.
