

FEI PRESS RELEASE

FEI LAUNCHES NEW EVENTING RISK MANAGEMENT PROGRAMME

17 January 2010

Malmö (SWE), 17 January 2010

A new worldwide Eventing Risk Management Policy and Action Plan aimed at reducing cross-country horse falls was launched at the third annual FEI Safety meeting in Malmö, Sweden, today. Based on a six-year statistical study of the sport, the Action Plan will be a functional and reliable system that will be used to monitor risk factors in Eventing, and to streamline international data and ideas to further understand the root causes of falls.

The FEI Eventing Committee has set the target to reduce horse falls by 10% (and by 20% at 4-star level) over the next three years. Already, data for the period from 2004-2009 shows that, despite a significant increase in the popularity of the sport – a 35% increase in the number of competitions and a 22.5% increase in the total number of starters – the percentage of horse falls has decreased from 2.02% to 1.73%. This is the first time that a statistical database has monitored the sport on a global basis.

“Eventing is and will remain a risk sport. Our duty is to manage that risk,” explains Giuseppe Della Chiesa (ITA), the new chairman of the FEI Eventing Committee and the FEI Eventing Risk Management Advisor.

“Our major goal was to have a professional system to monitor and manage the risk in the sport and we now have that. This is not an emotional reaction, it’s a structure that provides a systematic approach to managing the risks involved in our sport. There will still be accidents, but we can use this system to better manage the risk and keep it within acceptable and accepted levels.”

Alex McLin, FEI Secretary General, concludes: “The Eventing Risk Management Policy and Action Plan is a major step towards ensuring that our horses and riders are not exposed to unnecessary risk in what is inherently a risk sport. In the past there has been a tendency just to count the accidents, but we need to be more proactive and count all the near-misses too. It’s all part of a cultural shift in the mindset of the sport. Education is key.”

The Action Plan includes:

- Statistical database, to include medical and veterinary data on falls
- A standardised template to achieve consistency in the collection of international data (this will be produced twice a year)
- Compulsory appointment of a National Safety Officer (NSO) by all countries organising international Eventing fixtures to collate statistics and gather information for the FEI in the event of a serious accident
- FEI guidelines on cross-country course design aimed at minimizing risk
- Continuing work on frangible pins and deformable structures for cross-country fences
- Education of everyone involved in the sport of eventing – riders, officials and course designers; risk management will become an integral part of all national seminars
- Increased focus and education about the definition of dangerous riding

Twenty-two nations were represented at the NSOs' seminar in Malmö, where delegates demonstrated the greatly heightened awareness of risk management shown over the last two years and also the continually evolving nature of Eventing.

Steps taken include trials with and the patenting of deformable devices in Sweden, Britain, Canada, Netherlands and Italy; initiatives by the German and Czech Republic National Federations to teach riders safer falling techniques; emphasis on style in competitions in Canada and Germany; rider licensing, exams and rule changes in France; twice yearly medical examinations in Poland and a fitness badge in Germany, plus several other national projects.

Canada's National Safety Officer Peter Gray commented: "The forum has exceeded my expectations and it will make my job easier. The presentations from each country were really useful - it's a great opportunity to see how the sport is developing worldwide and to share problems and ideas."

Notes to Editors:

There have been six rider fatalities at 2.3 million fences jumped in international Eventing competitions since 2004.

The Risk Management Policy and Action Plan is the result of a collaborative effort between former Safety Committee Chairman David O'Connor (USA), the newly appointed Chairman of the Eventing Committee and FEI Eventing Risk Management Advisor, Giuseppe Della Chiesa (ITA), the Eventing Committee members and FEI staff.

The FEI Eventing Risk management policy and vision statements have been endorsed by the FEI General Assembly in 2009.

It was initially presented at the HSBC FEI European Eventing Championships at Fontainebleau, France, in September 2009, and received universal approval. The timing of the official launch of the policy and action plan at the National Safety Officers' forum was chosen specifically to highlight the FEI's continuing focus on risk management going forward into the 2010 season.

Twenty-two nations were represented at the forum: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Ireland, Italy, Netherlands, Norway, Poland, Portugal, Russia, Spain, Switzerland and Sweden.

FEI VISION STATEMENT FOR EVENTING

Eventing constitutes an exciting and challenging all-round test of riding ability and horsemanship within an accepted and acceptable level of risk. Every effort must be made to ensure that, at each level, responsible athletes are participating with progressively trained horses in order not to be exposed to a higher risk than what is strictly inherent to the nature of the competition.
